

Hyper-local business planning report

Abhirampur (P), North 24 Parganas

Recommendation	Project cost	Month-12 cash	Confidence
Dairy	INR 15,000	INR 1,176	MEDIUM

Planning estimates are not guaranteed income, a loan sanction, or a substitute for current supplier, customer, licence and lender verification.

1. Recommendation

The finite MVV oracle selected delivery as the lowest-investment tested configuration satisfying the active profile constraints and creating useful counterfactual flow.

Candidate	rented-delivery-v2
Project cost	INR 15,000
Own capital deployed	INR 15,000
Capital retained	INR 85,000
Finance required	INR 0
Entry difficulty	LOW

2. Local market and evidence

Demand	1,225.55 - 1,695.28 litres/month (PROJECTED)
Reachable supply	537.29 - 2,014.84 litres/month (MODELLED_ACCESSIBLE_SUPPLY)
Price / unit value	42.95 - 64.43 INR/litre (RECENT_SURVEY_UNIT_VALUE)
Modelled gap	372.68 litres/month
Planning radius	Unknown km
Nearest market	Not linked

Customer segments

- households
- tea/sweet shops
- restaurants
- schools/institutions

Supplier types

- milk producers
- collection centres
- cooperatives/processors

Distribution channels

- PRIMARY: door delivery (LOW_ASSUMPTION_BASED)
- SECONDARY: retailer/tea-shop supply (LOW_ASSUMPTION_BASED)

- SECONDARY: institutional supply (LOW_ASSUMPTION_BASED)

3. Competition and catchment

Direct mapped candidates	Unknown
Indirect mapped candidates	Unknown
Intensity	Unknown
Incumbent capacity	Unknown
Market concentration / HHI	Not calculated - market shares are unavailable

4. Business setup

CAPEX	INR 8,700
Working capital	INR 6,300
Monthly fixed OPEX	INR 225
Staff	1
Space	170 sq ft
Service radius	7.5 km
Inventory days	2
Receivable days	5
Payable days	3

Equipment

- food-grade cans
- weighing/testing kit
- insulated transport

Quality controls

- collection time log
- temperature/acidity check
- rejection/spoilage log

Licences to verify

- FSSAI registration
- local trade registration

Operational factors

- yield
- feed/fodder
- animal health
- spoilage
- chilling
- route time

Weather / seasonality factors

- heat stress

- flood/route disruption

5. CAPEX, OPEX and working capital

CAPEX allocation

Equipment And Fixtures	INR 6,090
Installation And Setup	INR 1,305
Premises Deposit And Basic Fitout	INR 870
Licensing And Contingency	INR 435

Fixed monthly OPEX allocation

Labour	INR 79
Premises/Chilling	INR 56
Maintenance	INR 56
Other	INR 34

Month-12 variable cost allocation

Milk Procurement	INR 2,081
Spoilage	INR 182
Fuel/Transport	INR 208
Testing/Packaging	INR 130
Minimum modelled	INR 6,300
Recommended with 15% buffer	INR 7,245
Cash-conversion cycle	4 days

6. Finance and 36-month cash flow

Month-12 revenue	INR 4,002
Month-12 operating cash	INR 1,176
Operating break-even	Month 1
Investment payback	Month 16
36-month NPV at 12%	INR 17,284
Annualized IRR	91.8%
Break-even volume	11.97

Quarterly cash-flow checkpoints

Month	Revenue	Operating cash	Closing cash	DSCR
3	INR 2,001	INR 475	INR 85,726	-
6	INR 4,002	INR 1,176	INR 88,552	-
9	INR 4,002	INR 1,176	INR 92,079	-
12	INR 4,002	INR 1,176	INR 95,606	-
15	INR 4,002	INR 1,176	INR 99,133	-

Month	Revenue	Operating cash	Closing cash	DSCR
18	INR 4,002	INR 1,176	INR 102,660	-
21	INR 4,002	INR 1,176	INR 106,187	-
24	INR 4,002	INR 1,176	INR 109,713	-
27	INR 4,002	INR 1,176	INR 113,240	-
30	INR 4,002	INR 1,176	INR 116,767	-
33	INR 4,002	INR 1,176	INR 120,294	-
36	INR 4,002	INR 1,176	INR 123,821	-

Current scheme screening

Scheme	Freshness	Eligibility	Status
Pradhan Mantri MUDRA Yojana	CURRENT	None	illustrative eligibility screening; not lender approval
Animal Husbandry Infrastructure Development Fund	CURRENT	None	current rule-window eligibility screening through 2026-09-30; not lender approval or confirmation that the application window is accepting submissions

7. Scenario analysis and failure boundaries

Scenario count	512
Scenario survival	100.0%
Payback within 36 months	90.8%
10th percentile minimum cash	INR 84,886
CVaR 95% cumulative loss	INR -7,051
Calibration	PLANNING_SCENARIOS_NOT_EMPIRICALLY_CALIBRATED

Failure boundaries

Variable	Threshold	Interpretation
monthly_demand	- planning revenue units/month	No cash failure up to 100% demand deterioration.
selling_price_factor	0.08 share of central planning price	Plan becomes cash-negative below approximately 0.076x central selling price.
variable_cost_factor	2.42 multiple of central variable cost	Plan becomes cash-negative above approximately 2.421x central variable cost.
fixed_opex_factor	- multiple of central fixed OPEX	No cash failure up to 900% fixed OPEX increase.
minimum_cash_buffer	0 INR opening cash after startup investment	Approximately INR 0 opening cash is required to remain non-negative in the central 36-month model.

Sensitivity ranking

Variable	Low cash	Central cash	High cash	Elasticity
selling_price	INR 976	INR 1,176	INR 1,376	3.4
variable_cost	INR 1,306	INR 1,176	INR 1,046	-2.21
fixed_opex	INR 1,187	INR 1,176	INR 1,164	-0.19
demand	INR 1,176	INR 1,176	INR 1,176	0

8. Computed SWOT and pre-mortem

Strengths

- Central planning payback is 16 months.
- The modelled cash-conversion cycle is short at 4 days.
- Month-12 operating cash flow is positive in the central model.

Opportunities

- The planning graph contains 372.68 units of unserved flow.
- A secondary retailer/tea-shop supply channel can diversify the primary route.
- 1 marginal capacity repair options were evaluated.

Threats

- Selling Price is the strongest tested cash driver (elasticity 3.40).
- Competitor capacity and market shares remain unknown.

Pre-mortem

- Adverse selling price moved cash below plan. Prevention: Validate current customer prices and negotiate supplier terms first.
- Adverse variable cost moved cash below plan. Prevention: Obtain two supplier quotes and cap procurement cost per unit.
- Adverse fixed opex moved cash below plan. Prevention: Avoid a long lease until three months of demand are demonstrated.

9. Action plan

Before starting

- Validate at least two current supplier quotations and one customer selling price.
- Confirm premises, power/water/internet needs and every listed licence with authority.
- Ring-fence at least INR 6,300 as working capital.

Week 1

- Interview at least ten target customers and record purchase frequency and price.
- Run a paid micro-pilot before buying the full equipment configuration.

Month 1

- Track daily sales, contribution margin, inventory days, cash and rejected/wasted stock.
- Reconcile supplier invoices and customer receipts weekly.

Months 2-3

- Continue only if contribution margin and closing cash remain non-negative.
- Add the secondary channel only after the primary channel repeats reliably.

Months 4-6

- Compare realized sales with the model interval and recalibrate before expansion.
- Build at least two active suppliers and avoid single-buyer dependence.

Stop / reconsider

- Use the tested demand-deterioration statement as the sales stop rule.
- Validate current customer prices and negotiate supplier terms first.
- Obtain two supplier quotes and cap procurement cost per unit.

10. Evidence, confidence and limitations

Decision confidence: MEDIUM. Methodology: decision-v6. Analysis ID: 3b2eaa0-6b06-4faa-aaa6-512d33963d48.

Variable	Dataset	Observation	Freshness	Confidence

Evidence gates and limitations

- Current farmgate, procurement, wholesale and retail prices are not linked at this locality. The cash model uses an ASUSE enterprise-margin benchmark; validate current prices before spending.
- Current route cost, travel time and chilling availability are unknown; validate the selected route and spoilage controls in a paid pilot.
- Current PMMY category screening is available, but lender-specific verified interest/tenure and underwriting are absent for a real financing decision.
- No verified/proxy coordinate is attached, so spatial catchment was not computed.
