

Simple summary

Rural distribution and aggregation

Puapur, Purulia

Bottom line

Promising, but verify local prices and demand and start small.

Why this venture

It is the lowest-investment tested configuration that satisfies the active profile constraints and improves useful local flow. The evidence indicates a modelled service gap inside the selected catchment. This is a planning estimate, not measured locality turnover.

Who this suits

An owner-operator who can supervise daily buying, selling, quality and cash control. Avoid it if you cannot verify local customers, suppliers, prices and licences before committing capital.

Money needed

Total project cost	Own money used	Money kept as reserve	External finance needed
INR 20,762 - 24,373	INR 22,567 - 22,567	INR 77,433 - 77,433	INR 0 - 0
Monthly revenue range	Monthly operating-cash range	Operating break-even	Investment payback
INR 1,610 - 1,968	INR 626 - 938	Month 1	Month 32

Local market

Demand opportunity	Price guidance	Competition
19,095.0 - 35,462.2 INR/month	INR 0 - 1 / gross margin share	6 direct / 0 indirect; LOW_PROXY_DENSITY; 20.0 km

Top advantages

- Uses the minimum-capital configuration selected by the MVV test.
- Keeps the recommendation tied to the selected locality and catchment.
- Shows cash resilience, break-even and failure conditions before investment.

Main disadvantages

- Local demand and supply are modelled from available evidence, not audited shop sales.
- OSM candidate counts do not measure competitor capacity, sales or market share.

Top risks

- Actual selling price or input cost may differ from the planning range.
- Working-capital pressure can delay break-even or create a cash shortfall.
- Customer and supplier availability must be checked on the ground.

First actions

1. Validate at least 20 likely customers and three suppliers before paying for equipment.
2. Confirm current prices, licences, utilities and delivery costs in writing.
3. Start with the minimum viable setup, track weekly cash, and expand only after repeat demand.

Hyper-local business planning report

Puapur, Purulia

Recommendation	Project cost	Month-12 cash	Confidence
Transport	INR 22,567	INR 782	MEDIUM

Planning estimates are not guaranteed income, a loan sanction, or a substitute for current supplier, customer, licence and lender verification.

1. Recommendation

The finite MVV oracle selected distribution as the lowest-investment tested configuration satisfying the active profile constraints and creating useful counterfactual flow.

Candidate	micro-v1
Project cost	INR 22,567
Own capital deployed	INR 22,567
Capital retained	INR 77,433
Finance required	INR 0
Entry difficulty	LOW

2. Local market and evidence

Demand	19,095.03 - 35,462.2 INR/month (MODELLED_BENCHMARK)
Reachable supply	11,738.75 - 21,800.54 INR/month (MODELLED_BENCHMARK)
Price / unit value	0.34 - 0.56 gross margin share (MODELLED_BENCHMARK)
Modelled gap	10,508.98 INR/month
Planning radius	20.0 km
Nearest market	Neamatpur Vegetable Market

Customer segments

- small retailers
- producers
- institutions and small businesses

Supplier types

- regional wholesalers
- producer groups
- transport contractors

Distribution channels

- PRIMARY: fixed retailer route (LOW_ASSUMPTION_BASED)
- SECONDARY: aggregator service (LOW_ASSUMPTION_BASED)
- SECONDARY: institutional delivery (LOW_ASSUMPTION_BASED)

3. Competition and catchment

Direct mapped candidates	6
Indirect mapped candidates	0
Intensity	LOW_PROXY_DENSITY
Incumbent capacity	Unknown
Market concentration / HHI	Not calculated - market shares are unavailable

Nearest direct candidates

Name	Category	Straight-line distance
Neamatpur Vegetable Market	MARKET	9.07 km
Galaxy mall	MARKET	12.72 km
Burnpur Daily Market	MARKET	12.99 km
Centrum Mall	MARKET	13.99 km
Adda Market	MARKET	16.14 km
Infinity Tower	MARKET	17.01 km

4. Business setup

CAPEX	INR 13,540
Working capital	INR 9,027
Monthly fixed OPEX	INR 23
Staff	1
Space	40 sq ft
Service radius	9 km
Inventory days	5
Receivable days	10
Payable days	7

Equipment

- rented/shared vehicle access
- handling crates
- route/phone tools

Quality controls

- trip sheet
- load-factor log
- fuel and maintenance log

Licences to verify

- commercial vehicle and trade compliance as applicable

Operational factors

- fuel

- road access
- vehicle efficiency
- load factor
- empty return
- downtime

Weather / seasonality factors

- heavy rain/flood route disruption

5. CAPEX, OPEX and working capital

CAPEX allocation

Equipment And Fixtures	INR 9,478
Installation And Setup	INR 2,031
Premises Deposit And Basic Fitout	INR 1,354
Licensing And Contingency	INR 677

Fixed monthly OPEX allocation

Labour	INR 8
Vehicle Maintenance	INR 8
Digital/Phone	INR 2
Other	INR 5

Month-12 variable cost allocation

Transport/Fuel	INR 541
Handled Goods/Packaging	INR 295
Loss/Damage	INR 49
Other Trip Cost	INR 98
Minimum modelled	INR 9,027
Recommended with 15% buffer	INR 10,381
Cash-conversion cycle	8 days

6. Finance and 36-month cash flow

Month-12 revenue	INR 1,789
Month-12 operating cash	INR 782
Operating break-even	Month 1
Investment payback	Month 32
36-month NPV at 12%	INR -785
Annualized IRR	9.5%
Break-even volume	51.16

Quarterly cash-flow checkpoints

Month	Revenue	Operating cash	Closing cash	DSCR
3	INR 894	INR 379	INR 78,169	-
6	INR 1,789	INR 782	INR 80,112	-
9	INR 1,789	INR 782	INR 82,458	-
12	INR 1,789	INR 782	INR 84,804	-
15	INR 1,789	INR 782	INR 87,149	-
18	INR 1,789	INR 782	INR 89,495	-
21	INR 1,789	INR 782	INR 91,841	-
24	INR 1,789	INR 782	INR 94,187	-
27	INR 1,789	INR 782	INR 96,532	-
30	INR 1,789	INR 782	INR 98,878	-
33	INR 1,789	INR 782	INR 101,224	-
36	INR 1,789	INR 782	INR 103,570	-

Current scheme screening

Scheme	Freshness	Eligibility	Status
Pradhan Mantri MUDRA Yojana	CURRENT	None	illustrative eligibility screening; not lender approval
Animal Husbandry Infrastructure Development Fund	CURRENT	None	current rule-window eligibility screening through 2026-09-30; not lender approval or confirmation that the application window is accepting submissions

7. Scenario analysis and failure boundaries

Scenario count	512
Scenario survival	100.0%
Payback within 36 months	58.2%
10th percentile minimum cash	INR 77,498
CVaR 95% cumulative loss	INR -14,202
Calibration	PLANNING_SCENARIOS_NOT_EMPIRICALLY_CALIBRATED

Failure boundaries

Variable	Threshold	Interpretation
monthly_demand	- planning revenue units/month	No cash failure up to 100% demand deterioration.
selling_price_factor	- share of central planning price	No cash failure up to 100% selling price deterioration.
variable_cost_factor	4.14 multiple of central variable cost	Plan becomes cash-negative above approximately 4.142x central variable cost.
fixed_opex_factor	- multiple of central fixed OPEX	No cash failure up to 900% fixed OPEX increase.
minimum_cash_buffer	0 INR opening cash after startup investment	Approximately INR 0 opening cash is required to remain non-negative in the central 36-month model.

Sensitivity ranking

Variable	Low cash	Central cash	High cash	Elasticity
selling_price	INR 692	INR 782	INR 871	2.29
variable_cost	INR 831	INR 782	INR 733	-1.26
fixed_opex	INR 783	INR 782	INR 781	-0.03
demand	INR 782	INR 782	INR 782	0

8. Computed SWOT and pre-mortem

Strengths

- The modelled cash-conversion cycle is short at 8 days.
- Month-12 operating cash flow is positive in the central model.

Weaknesses

- Local demand is a regional benchmark, not observed locality sales.

Opportunities

- The planning graph contains 10509 units of unserved flow.
- A secondary aggregator service channel can diversify the primary route.
- 1 marginal capacity repair options were evaluated.

Threats

- Selling Price is the strongest tested cash driver (elasticity 2.29).
- Competitor capacity and market shares remain unknown.

Pre-mortem

- Adverse selling price moved cash below plan. Prevention: Validate current customer prices and negotiate supplier terms first.
- Adverse variable cost moved cash below plan. Prevention: Obtain two supplier quotes and cap procurement cost per unit.
- Adverse fixed opex moved cash below plan. Prevention: Avoid a long lease until three months of demand are demonstrated.
- Customer acquisition was slower because nearby alternatives existed. Prevention: Interview customers and differentiate channel/service before launch.
- The regional benchmark did not translate into real locality sales. Prevention: Run a small paid pilot and replace the benchmark with observed sales.

9. Action plan

Before starting

- Validate at least two current supplier quotations and one customer selling price.
- Confirm premises, power/water/internet needs and every listed licence with authority.
- Ring-fence at least INR 9,027 as working capital.

Week 1

- Interview at least ten target customers and record purchase frequency and price.
- Run a paid micro-pilot before buying the full equipment configuration.

Month 1

- Track daily sales, contribution margin, inventory days, cash and rejected/wasted stock.
- Reconcile supplier invoices and customer receipts weekly.

Months 2-3

- Continue only if contribution margin and closing cash remain non-negative.
- Add the secondary channel only after the primary channel repeats reliably.

Months 4-6

- Compare realized sales with the model interval and recalibrate before expansion.
- Build at least two active suppliers and avoid single-buyer dependence.

Stop / reconsider

- Use the tested demand-deterioration statement as the sales stop rule.
- Validate current customer prices and negotiate supplier terms first.
- Obtain two supplier quotes and cap procurement cost per unit.

10. Evidence, confidence and limitations

Decision confidence: MEDIUM. Methodology: decision-v6. Analysis ID: f7693718-8882-49cd-a5cb-88b1749c171d.

Evidence gates and limitations

- Scheme category screening is current; actual rate, sanction and lender underwriting still require a lender quote.
- OSM POIs are volunteered proxy evidence and may be incomplete.
